NOV 0 8 2001 TECH CENTER 1600/290

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

FUKUMURA, et al.

Serial No.: 09/720,979

Filed: January 8, 2001

For: NEGATIVE-SENSE RNA VIRUS

VECTOR FOR NERVE CELL

Art Unit: To Be Assigned

Examiner: To Be Assigned

Atty. Docket: 4001-0003

PRELIMINARY AMENDMENT

Assistant Commissioner for Patents Washington, D.C. 20231

Sir:

Prior to examination of the above-identified application, Applicants herewith respectfully request the following amendments:

IN THE SPECIFICATION:

On page 14, line 14, change "sigma" to --lambda--.

On page 18, line 29, change "37.5°C" to --38°C to 38.5°C--

On page 19, line 25, change "37°C" to --38°C to 38.5°C

On page 19, line 29, change "hindbrain" to --brain region containing hippocampus--.

IN THE CLAIMS:

W.

5. [A] <u>The</u> method of [any one of] claim[s] 1 [to 4], wherein nucleic acid contained in the negative-sense RNA viral vector comprises a foreign gene.

13. [A] The method of [any one of] claim[s] 1 [to 12], wherein said negative

sense RNA virus belongs to the Paramyxoviridae family.

15. A negative-sense RNA viral vector used for transferring nucleic acid into

nerve cells by the method of [any one of] claim[s] 1 [to 14].

REMARKS

It is respectfully requested that the Examiner enter these amendments prior to examining the application on its merits.

Respectfully submitted,

SHANKS & HERBERT

For: Negative-Sense RNA Virus Vector for

Nerve Cell

Second Preliminary Amendment

Assistant Commissioner for Patents Washington, D.C. 20231

Sir:

Prior to examination of the above-identified application, Applicants respectfully request the following amendments:

Amendments

In the Specification:

On page 7, please replace the paragraph at lines 8-12 with the following paragraph:

Figure 1 schematically shows a method for constructing the replication competent SeV comprising a foreign gene, such as for GFP or β-glucuronidase. Using primer 1 (SEQ ID NO:1), which has a *Not*I site, and primer 2 (SEQ ID NO:2), which comprises, a transcription termination signal (R2), an intervening sequence (IG), a transcription initiation sequence (R1) and a *Not*I site, the ORF of a foreign gene is amplified by PCR and inserted into the *Not*I site of pUC18/T7HVJRz.DNA (+18) (SEQ ID NO:3).

During Strains

Appl. No: 09/720,979

(U.S. National Stage of PCT/JP99/03552)

Atty. Dkt. No: 4001-0003

Remarks

Entry of the above amendments to the specification is respectfully requested. The amendments incorporate the sequence identification numbers into the specification and thus, no new matter has been added. A marked-up version of page 7, lines 8-12, of the specification indicating the additions to the paragraph therein is attached hereto.

This application is now in condition for examination. If the Examiner has any questions or comments, the Examiner is requested to contact the undersigned at the telephone number below.

Respectfully submitted,

SHANKS & HERBERT
